

FILE FORMATS

JPG

Joint Photo Expert Group - Used for images, photos & background paper. More compression, smaller file size. Cannot be made transparent.

PSD

Photoshop Document - Native file format for Photoshop files. Supports masks, transparency, channels, paths vector type/objects & layers.

PNG

Portable Network Graphic - Developed to replace GIF. Digital elements and quick pages are png files. Can be transparent.

TIF

Tagged Image File Format - Older file format for Photoshop. Can be saved with layers, channels, masks & paths but does not support transparency.

BMP

Bitmap file - BMP files are like PNG & GIF files made to render simple crisp logos, type, & icons. Used to print simple graphics.

GIF

Graphic Interchange Format - Used to save raster type, logos & graphics to a very small size. Can be animated & transparent. Pronounced as G not J.

PDF

Portable Document Format - A cross platform & cross application format. PDF files accurately display fonts, page layouts & vector BMP graphics.

SVG

Scalable Vector Graphic - Ideal for type, logos, graphics & vector shapes. Can be compressed without any loss of quality.
